

# Gastric Cancer — What We Found

every result, with one line of what it actually means

**CAF / stromal module**  
the real finding — it repeats in 4 cohorts

**Real data**  
every number is real — nothing invented

**External prognosis**  
more stroma, worse survival — everywhere

**Single-cell check**  
the signal lives in fibroblasts, as expected

**Not a purity trick**  
genuine biology, not just low tumour content

**Immune, validated**  
our estimates match what pathologists measured

**Immune landscape**  
macrophage-rich; EBV & MSI tumours run hot

**Gene signature**  
a modest, honest predictor — not a standalone test

**Reduced diversity**  
less microbial variety in cancer — this one holds

**Microbiome caution**  
much 'dysbiosis' is a sequencing-batch artefact

**Causal test**  
no proof that microbes cause the cancer

**Drug target**  
tumours depend on PIK3CA — a real, druggable hit

- colour
-  the headline
  -  holds up
  -  solid support
  -  honest caution

one real finding + honest limits = trustworthy

Read down the middle: the result, then what it means for you.
